

Profiled Handle (PP) or (PPC)

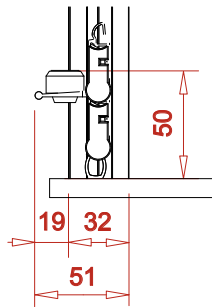

WARNING !

Closing system only available with ALUCOFFRE !

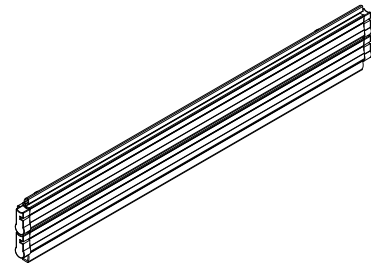

The roll-up door can be closed with a profiled handle without key (PP) or with key (PPC). The second profile is equipped with an extending part which makes it possible to grip the door and manipulate it as well as stopping it in the up position. When it's a simple handle with key, the roll-up door is locked in the lower position with a rod lock system in each track.
