Object : Modification N° 3 « Modification of our track seal »

Dear customer,

In order to improve our product, we are going to change the material and the surface of our actual track seal.

The easy handling of our product when you open or close it, is our major advantage. In order to keep this smooth operation in any condition of use, (big difference of temperature, Special surface,...) we wish to reduce the brake of the shutter when you open or close it due to the friction of our track seal against the door.

To do this, our tracks seal is from now manufacture in EPDM material, before it was in TPE (PVC), and mainly floqued at the extremity of the track seal's lip to glide against the door easily.

From the 28th of august, all the shutters will be deliver with this new track seal.

Best regards.

MCD's team
